OMRON

The All-in-One Controller

Combining the processing power and data capacity of the CJ1M series and the built-in digital I/O functionality of the CPM2A series in a compact PLC outline, the CP1H CPU series sets new standards.

With 4 high-speed encoder inputs up to 1 MHz (single phase) and 4 pulse outputs up to 1 MHz (line driver), CP1H CPUs are ideal for positioning and speed control.
Their optional 4 analogue inputs and 2 analogue outputs plus advanced PID control with auto-tuning also make them ideal for continuous control applications.

Small-scale control   Large-scale control

What's more, expandable with CPM1A I/O units (up to 320 I/O points) and up to two CJ1 Special I/O units or CPU bus units, CP1H CPUs offer a wide range of communication interfaces and advanced I/O units.

Equipped with a USB interface as standard for programming and monitoring, the new CPUs allow up to two serial ports to be plugged in for communication with HMI or field devices. And, of course, they provide 'Smart Platform' communication routing over multiple network layers.

Using CX-One, programs can be created that enable the user to build, configure and program networks, PLCs, HMIs, motion-control systems, drives, temperature controllers and sensors.

The CP1H CPU series has the same architecture as the CS/CJ PLC series, which means programs are compatible for memory allocations and instructions and also support Function Blocks and Structured Text.

Features at a glance

- 4 high-speed encoder inputs and 4 fast pulse outputs

- AC or DC supply, 24 digital inputs and 16 digital outputs (transistor or relay)

- CJ1M-compatible instruction set and execution speed

- Expandable with intelligent CJ1 I/O and communication units

- Analogue I/O built-in (optional), RS232C and RS-422A/485 serial ports (plug-in option boards)

Serial communications

Two Option Boards can be mounted for RS-232C or RS-422A/485 communications making it easy to simultaneously connect to a PT, and other devices such as Inverters, Temperature controllers, Smart Sensors or Serial PLC link. The standard USB port is used for connection to a personal computer.

Two serial Option Boards can be used for either an RS-232C or RS-422A/485 interface.

Reduce development time with efficient tools

• **Plug-and-play USB Connection**

Just install the CX-Programmer (Ver. 6.1 or higher) and connect the USB cable to the CP1H. The driver will be installed automatically.

Personal computer CX-One

• **A Built-in USB Port (USB 1.1, Type B) Enables a Personal Computer to Be Connected using a standard USB cable.**

Standard A-type male to B-type male USB cables can be used.
Note: Programming Consoles (e.g., CQM1H-PRO01 and C200H-PRO27) cannot be used with the CP1H.

A Wealth of Instructions

• **PID Instruction with Autotuning**

PID constants can be automatically tuned for the PID instruction. The limit cycle method is used for tuning, allowing tuning to be completed quickly.

• **Floating-point Decimal Instructions, Trigonometric Instructions, and More.**

Just like the CS/CJ-series PLCs, the CP1H has approximately 400 instructions for ladder programming.

The Structured Text (ST) Language Makes Arithmetic Operations Even Easier

In addition to ladder programming, function block logic can be written in ST language, which conforms to IEC 61131-3. Arithmetic processing is also possible with ST, including processing of absolute values, square roots, logarithms, and trigonometric functions (SIN, COS, and TAN). Processing that is difficult to write in ladder programming becomes easy using structured text.
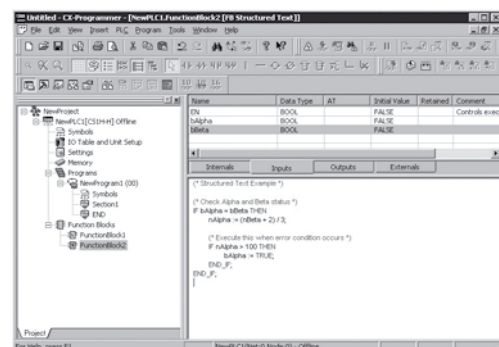

Communications Programs Are Provided by the Function Block Library

OMRONs Function Block Libraries drastically reduce the amount of programming needed to communicate with field devices. Just drag and drop a pre-tested function block in your program and set the parameters. You'll be up and running within one minute.

• A FB Library for Pulse Outputs.

Function blocks are also provided for pulse outputs to make it easy to write programs for positioning in addition to communications function blocks. These function blocks will reduce the time required for developing programs for applications such as for OMRON's Smartstep Servo System.

CX-One

CX-One is a single programming and configuration environment that enables the user to build, configure and program networks, PLCs, HMIs, Motion Control systems, Drives, Temperature Controllers and Sensors. The result of a single software is to reduce complexity of the configuration, allowing automation systems to be programmed or configured with minimal training.

❶ Analogue Inputs Are Made Simple

An analogue control setting and an analogue input are provided.

Analogue setting

The analogue control setting has a resolution of 256 steps. When the value is changed it is displayed (hexadecimal) for three seconds on the 7-segment display.
Analogue Input

This input has a resolution of 256 steps and is used for an analogue input set of 0 to 10 V. Each CP1H CPU Unit has one of these connectors built in. (The built-in analogue I/O for CP1H-XA CPU Units is separate.) A device, such as a potentiometer, can be connected to enable direct manual operation and control from a control panel. The maximum cable length is 3 metres. A connecting cable (1 m) is included with the CPU Unit.

❷ Memory Cassette

- Data, such as programs and initial memory values, can be stored on a Memory Cassette (optional) and copied to other systems.
- The Memory Cassette can also be used when installing new versions of application programs.

❸ 7-segment Status Display

- The 7-segment Display provides two display digits.
- In addition to displaying error codes for errors detected by the PLC, codes can be displayed on the display from the ladder program.
- The 7-segment display is useful for maintenance as well, allowing problems that arise during system operation to be grasped without using any Support Software.

Example display: A memory error occurs in the UM (error code 80F1, error details 0001).

❹ Battery-free Operation

- The values in the DM Area (32 Kwords) are saved in the CPU Unit's built-in flash memory as initial values, and can be read at startup.
- Battery-free operation is also possible when saving production data and machine parameters in the DM Area, turning OFF the power, and using the same data again for the next production run.

Note:
- A battery is required for the clock function and to retain the status of HR.
- Area bits and counter values. A battery is provided as a standard feature with the CPU Unit.
- The user program (ladder program) is stored in built-in flash memory, so no battery is required to back it up.

Index Register Area		6 registers (16 bits): IR0 to IR15		
Task Flag Area		32 flags (32 bits): TK0000 to TK0031		
Trace Memory		4,000 words (500 samples for the trace data maximum of 31 bits and 6 words.)		
Memory Cassette		A special Memory Cassette (CP1W-ME05M) can be mounted. Note: Can be used for program backups and auto-booting.		
Clock function		Supported. Accuracy (monthly deviation): −3.5 min to −0.5 min (ambient temperature: 55ºC), −1.5 min to +1.5 min (ambient temperature: 25ºC), −3 min to +1 min (ambient temperature: 0ºC)		
Communications functions		One built-in peripheral port (USB1.1): For connecting Support Software only. A maximum of two Serial Communications Option Boards can be mounted.		
Memory backup		Flash memory: User programs, parameters (such as the PLC Setup), comment data, and the entire DM Area can be saved to flash memory as initial values. Battery backup: The Holding Area, DM Area, and counter values (flags, PV) are backed up by a battery.		
Battery service life		5 years at 25ºC. (Use the replacement battery within two years of manufacture.)		
Built-in input terminals		40 (24 inputs, 16 outputs)		20 (12 inputs, 8 outputs) Line-driver inputs: Two axes for phases A, B, and Z Line-driver outputs: Two axes for CW and CCW
Number of connectable Expansion (I/O) Units		CPM1A Expansion I/O Units: 7 max.; CJ-series Special I/O Units or CPU Bus Units: 2 max.		
Max. number of I/O points		320 (40 built in + 40 per Expansion (I/O) Unit x 7 Units)		300 (20 built in + 40 per Expansion (I/O) Unit x 7 Units)
Interrupt inputs		8 inputs (Shared by the external interrupt inputs (counter mode) and the quick-response inputs.)		6 inputs (Shared by the external interrupt inputs (counter mode) and the quick-response inputs.)
Interrupt inputs counter mode		8 inputs (Response frequency: 5 kHz max. for all interrupt inputs), 16 bits		6 inputs (Response frequency: 5 kHz max. for all interrupt inputs), 16 bits
Quick-response inputs		8 points (Min. input pulse width: 50 µs max.)		6 points (Min. input pulse width: 50 µs max.)
Scheduled interrupts		1
