

JUNMA ML-2 SERVO SYSTEM

Save space, save wiring, save time

» Compact size

» Tuning-less concept

» Easy connect

Advanced Industrial Automation

OMRON

A new concept in drive simplicity

The Junma ML-2 ultra-compact servo series draws on our world-leading servo-drive technology to open up new dimensions in drive simplicity. In contrast to ordinary servos, the Junma series requires no tuning. What's more, the servo drives feature a built-in MECHATROLINK-II motion bus, allowing the servos to be easily daisy-chained and controlled through a single cable. Saving time and cabling costs. The result – fast and simple connections, plus fast and simple setting up. And the series' ultra-compact size with a footprint of 67.5 cm² means less installation space and further costs savings.

What more could you want?

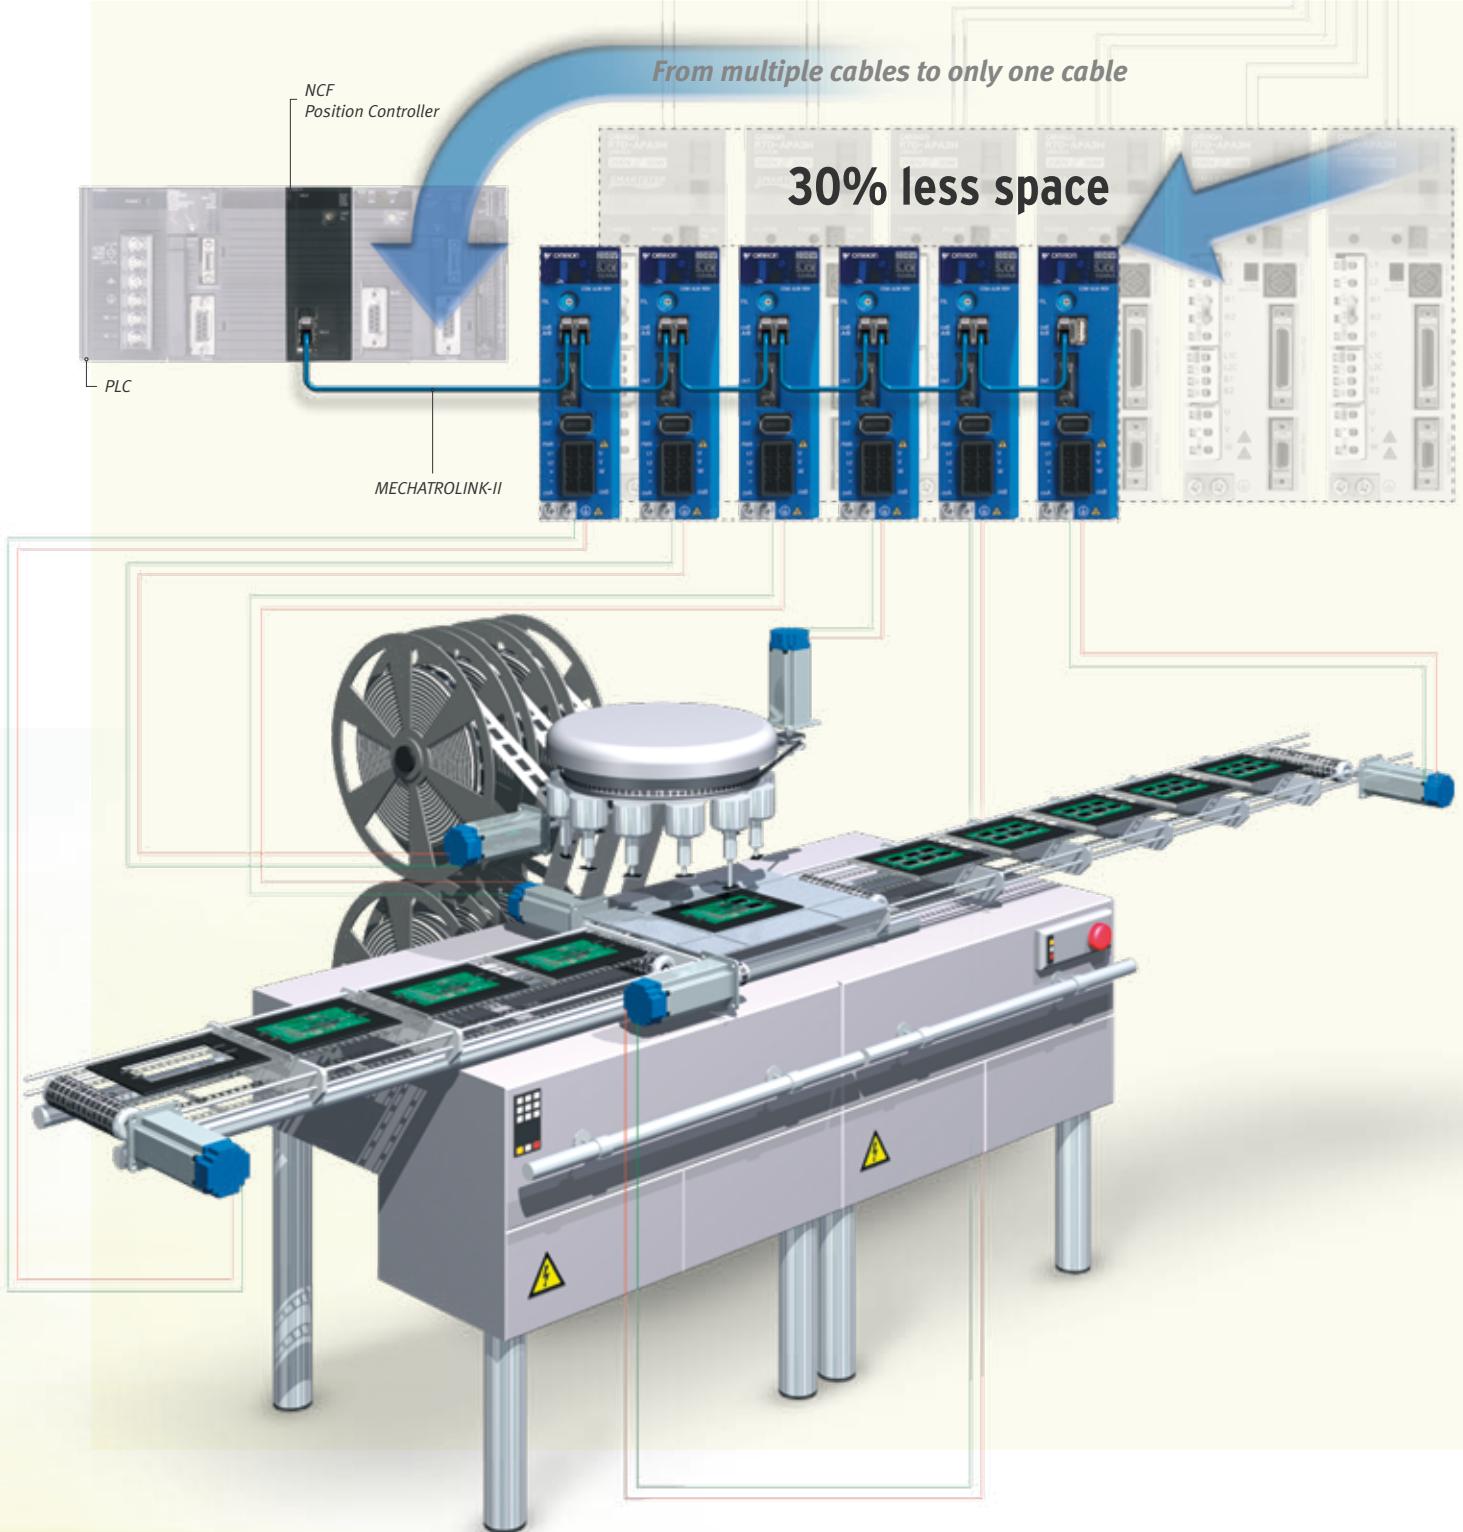

The Junma ML-2 series also shares other performance characteristics that have made Omron-Yaskawa servos leading products worldwide. Like fast response, high speed, high torque, high accuracy and proven reliability. Five good reasons for choosing Junma ML-2 servos for all your point-to-point motion-control applications.

Junma ML-2 features

- Compact size means less panel space
- Built-in MECHATROLINK-II motion bus simplifies connection to the controller and saves cost
- Tuning-less technology built-in for immediate start-up
- Drive information transparency (not available with classical pulse or analogue servo control)

Save space, save wiring, save time

No tuning

The advanced technology embodied in the Junma ML-2 series makes the dream of the no-tuning servo solution a reality.

No gain parameters need to be set. Just connect up to the motor and you're ready to go.

Connection simplicity

With their built-in MECHATROLINK-II motion bus, just a single cable is needed to connect servos together. So you not only save on wiring and installation time, you also significantly reduce the chance of connection errors. And reliability is increased since the single-cable connection is much more rugged than a multiple-wiring solution.

Junma ML-2 + NCF the optimum combination

Less is more...

Less space, fewer components and less installation time provides more performance and more flexibility.

The CJ1W-NCF71 Position Control Unit combined with the CJ1 PLC and Junma servo drives offer the best performance/size ratio on the market. The CJ1W-NCF71 is ideal for all point-to-point applications such as control of pick & place systems, gantry robots, electronic assembly equipment and labelling stations. Operation couldn't be simpler with motion commands set directly from the PLC ladder program to provide functions such as interrupt feeding and interpolation.

Easy remote access

What's more, the MECHATROLINK-II network provides full accessibility of drive information, making possible remote access via a PC connected to the PLC for commissioning, troubleshooting and maintenance.

NCF features and benefits

- 16 axes point-to-point positioning controller over MECHATROLINK-II
- Programmed from PLC program
- Easy, fast, reliable setup
- Optimised for positioning applications
- Simplified wiring to drives
- Integration into OMRON Smart Platform: Function Blocks, Smart Active Parts, CX-One
- PLCopen compliant Function Blocks
- Full control of servo drives and full parameter access via MECHATROLINK
- Advanced point-to-point: interpolation of 8 axes (4 axes + 4 axes)

PLCopen

A global standard for industrial control programming, PLCopen provides a standardized programming interface to harmonise the way people design and operate industrial-control software. The PLCopen compliant Function Blocks provided for the CJ1W-NCF71 simplify programming and reduce learning time for new users.

Smart Active Parts (SAPs) Library

The Smart Active Parts (SAPs) Library, also known as the Device Library, consists of screens with functions for Omron HMI terminals. SAPs can be used on screens developed by customers to quickly produce finished screens that interface with various control devices. And since the components are standardized, they also help to improve screen quality.

SJDE-□□ANA-OY, SJME-□

Junma ML-II Servo system

The ideal servo family for multi-axis positioning applications

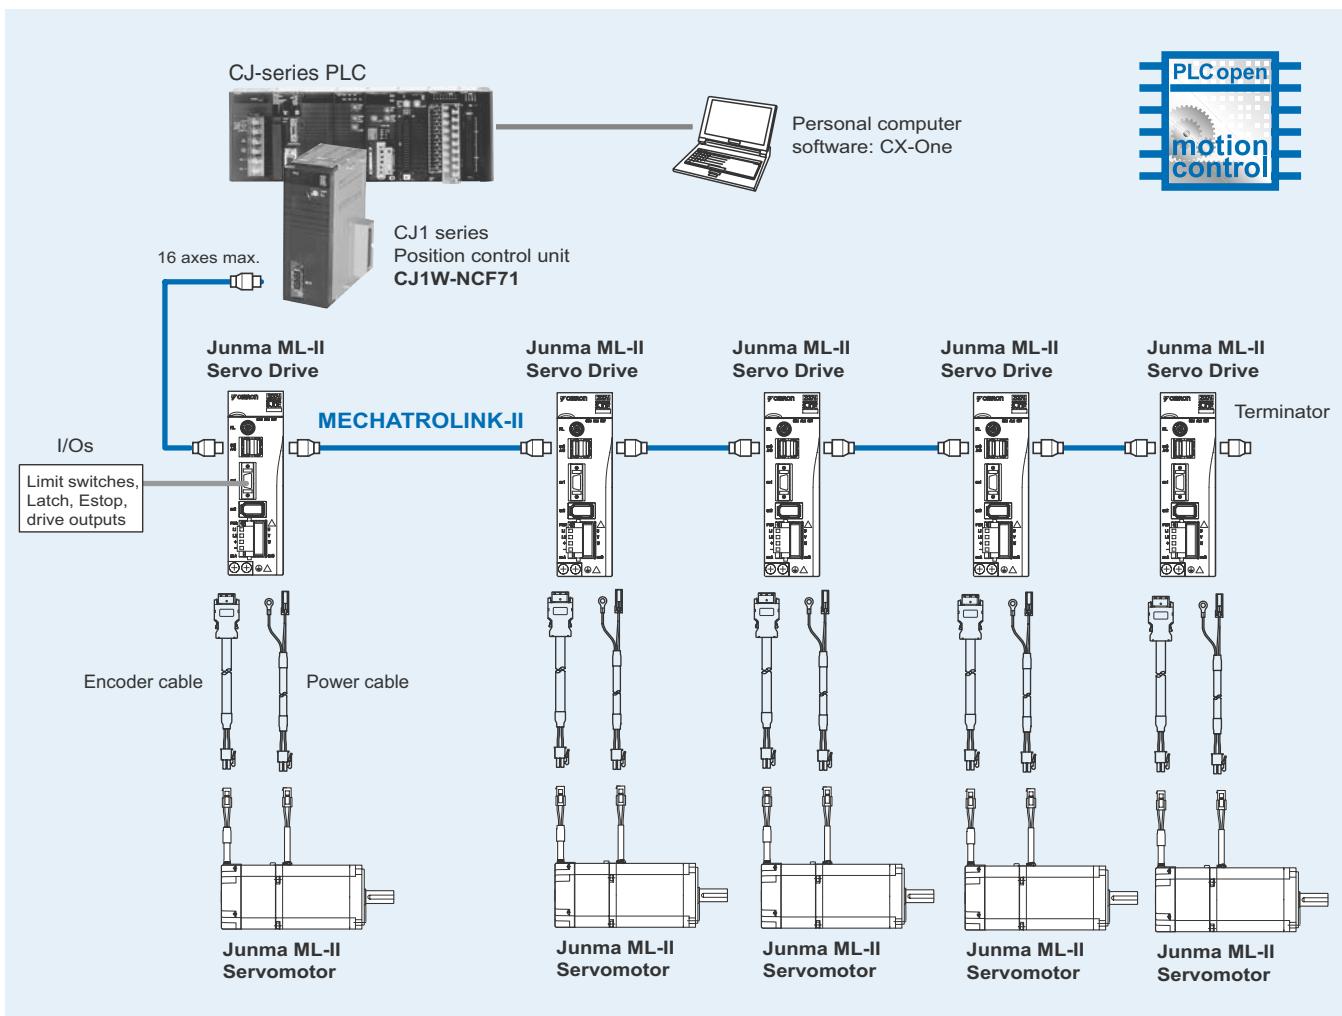

- Ultra compact size drive, height of 150 mm
- MECHATROLINK-II motion bus port build-in
- Tuning-less technology, no gain parameters need to be set
- Peak torque 300% of nominal during 3 seconds
- Full drive control via Mechatrolink-II motion bus
- Mechatrolink simplifies wiring and reduces installation time
- High response, high speed, high torque and high accuracy
- Access to the complete system from one point

Ratings

- 230 VAC Single-phase 100 W to 750 W (2.39 Nm)
