## - Cautions

Use the DIP Switch within the rated voltage and current ranges, otherwise the DIP Switch may have a shortened life expectancy, radiate heat, or burn out. This particularly applies to the instantaneous voltages and currents when switching.

## Correct Use

## CIRCUIT DESIGN

Although the minimum current is 10 mA ( 3.5 VDC ), contact reliability may need to be improved in some cases. This is particularly true when switching causes an increase in instantaneous current, such as in C-MOS IC applications. Do not let the peak current exceed the rated value here or any other time. Only BCD/hexadecimal 1-2-4-8 code is available for A6C/A6CV/A6R/A6RV models. If BCD/hexadecimal 1-2-4-8 complement code is required, make the appropriate provisions in the circuit.

## MOUNTING

Normally the default striker setting is OFF for slide-type DIP Switches and the default rotor setting is 0 for Rotary DIP Switches. Do not change these settings when mounting, soldering, washing or drying Switches. In rare cases, the striker may be deformed by heat generated during soldering.

## Automatic Insertion Machine

Use a body stopper system for the chute stopper of automatic insertion machines. When mounting Switches using an insertion machine incorporating a half-lead stopper, make sure the machine will not deform the terminals of the Switch, or improper insertion may result. Check actual mounting conditions prior to using a half-lead stopper system.
A printed circuit board that is 1.2 to 1.6 mm thick is recommended.
Holes on the PCB should be at least 0.9 mm in diameter for automatic insertion.

## Manual or IC Socket Insertion

Commercially available insertion tools are recommended for mounting ICs on PCBs.
Terminal pitch, dimensions and other features are identical to that of standard ICs for IC socket compatibility (except for the A6H and A6S).
Align the terminals so they slide in simultaneously when the Switch is inserted into socket holes or into mounting holes predrilled at the specified dimensions. Apply downward force on the Switch until the terminals are properly seated on the PCB.
Do not try to remove a Switch by inserting a screwdriver between it and the PCB, and then twisting the screwdriver to peel the Switch off. Use a commercially available inserter/remover to remove the Switch.

## SOLDERING

Observe the following conditions when soldering the DIP Switch.

## General Precautions for Soldering

Set the pins to OFF before soldering an A6ER DIP Switch.
Before soldering the Switch on a PCB, make sure there is no unnecessary space between the Switch and the PCB.
Before soldering the Switch on a multilayer PCB, conduct a test to make sure the Switch will not be deformed by soldering heat on the pattern or land of the multilayer PCB.

## Automatic Soldering Bath (Except A6S/A6H)

Soldering temperature: $260^{\circ} \mathrm{C}$ max.
Soldering time: 5 s max. for a 1.6-mm thick, single-side PCB

Do not use an automatic soldering bath or manual soldering for A6S or A6H models.
Confirm in advance that flux will not bubble up onto the side of the PCB to which the Switch is mounted. Depending on the type of Switch, the flux may have an adverse effect if it enters the Switch.

The A6S and A6H are designed specifically for reflow soldering. Do not use an automatic soldering bath or manual soldering for these models.

## Reflow Soldering

Observe the following conditions for reflow soldering the A6S and A6H models.

Do not use reflow soldering for any models other than the A6S and A 6 H . Otherwise the plastic case may melt or deform.
The soldering conditions and the temperature around the Switch may vary with the type of reflow bath. Check the temperature profile and confirm soldering conditions as well as the amount of heat applied to the Switch prior to soldering.

## Manual Soldering (Except A6S/A6H)

Soldering temperature: $350^{\circ} \mathrm{C}$ at the tip of the soldering iron. Soldering time: 3 s max. for a $1.6-\mathrm{mm}$ thick, single-side PCB
Do not solder the Switch more than twice including any rectification soldering. An interval of five minutes is required between the first and second soldering

## WASHING

## Washable and Non-washable Models

The models for which washing are possible are shown in the following table.

| Washable | A6A, A6C, A6CV, A6D, A6DR, A6T <br> (with seal tape), A6S (with seal tape), <br> A6H (with seal tape) |
| :---: | :---: |
| Non-washable | A6R, A6RV, A6T (standard/raised actuator), <br> A6S (standard/raised actuator), A6E, A6ER |

## Washing Procedure

Ultrasonic cleaning is not available for slide-type DIP Switches with seal tape. These models may be wiped or dipped into washing agents for one minute maximum.
Slide-type DIP Switches with seal tape can be washed as long as the seal tape is not removed or pasted before washing. Noncompliance here will cause the quality of the seal to decline.

Washing equipment incorporating more than one washing bath can be used to clean washable models, provided that the washable models are cleaned for one minute maximum per bath and the total cleaning time does not exceed three minutes.

## Washing Agents

Apply alcohol-based solvents to clean washable models. Do not apply water or any other agents to clean any washable models, as such agents may degrade the materials or performance of the Switch.

## Washing Precautions

Do not impose any external force on washable models while washing.
Do not clean washable models immediately after soldering. The cleaning agent may be absorbed into the incomplete seal through respiration as the Switch cools. Wait for at least three minutes after soldering before cleaning.
Do not use washable Switches submerged in water or in locations exposed to water.

## HANDLING

## Slide-type DIP Switch operation

Do not apply excessive operating force to the Switch. Otherwise the Switch may be damaged or deformed, and the switch mechanism may malfunction as a result. Apply an operating force not exceeding $200 \%$ of the maximum rated operating force to the Switch.

Set slide-type DIP Switches with a tiny, rounded object, such as the tip of a ball-point pen or a small screwdriver. Do not set the DIP Switch using tweezers or any other sharp object that may damage it. Do not set the DIP Switch using the point of a
mechanical pencil, or lead powder or fragments may fall into the Switch and internal circuit board, causing the DIP Switch to malfunction and reducing the dielectric strength of the circuit board.
Although raised-type (A6B standard type) and piano-type strikers can be operated by fingertip, do not push too hard or too fast because this will deform or damage the striker.

## Rotary DIP Switch Operation

Set rotary-type DIP Switches with a flat-blade screwdriver that fits into the screwdriver groove. Using a screwdriver of inappropriate dimensions, or using a tool other than a flat-blade screwdriver may cause damage to the groove that may make the Switch impossible to operate.
Insert the flat-blade screwdriver vertically to operate the Switch. The Switch may be damaged if the screwdriver is inserted at an angle.
Do not use excessive force to operate the Switch, or it may damage or deform the Switch.

| Item | A6R/A6RV | A6A |  | A6C/A6CV |
| :---: | :---: | :---: | :---: | :---: |
|  | Top/Side operation, flat type | Standard type, flat type | Shaft type, wheel type | Top/Side operation type |
| Screwdriver groove | Depth: 1.0 |  |  |  |
| Applicable screwdriver: A | 1.8 to 2.1 | 3.5 to 3.8 |  | 2.0 to 2.4 |
| Applicable screwdriver: B | 0.7 to 0.8 | 0.4 to 0.5 |  | 0.5 to 0.6 |
| Part Names |  |  |  |  |

Note: All units are in millimeters unless otherwise indicated.

## Packing specifications

- A6S models with embossed taping specifications are shown below

Note: The perforations along both sides are for 8-pole Switches only. The perforations on the bottom of the diagram are not for 4- and 6-pole Switches.

| Applicable Models | A6S- $\square 102-\mathrm{P}$ |
| :--- | :--- |
| Standard | Conforms to JEITA. |
| Package Quantity | 900 per reel |

| No. of Poles | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ |
| :--- | :--- | :--- | :--- |
| $\mathbf{A}_{-0.2}^{+0.4}$ | 24 | 24 | 32 |
| $\mathbf{B}_{ \pm 0.15}$ | 11.5 | 11.5 | 14.2 |
| C | 11.6 | 16.7 | 21.7 |

Note 1: "BCD/hexadecimal $1-2-4-8$ " is a binary code that takes the value 1 for voltages that are high with respect to ground and takes the value 0 for voltages that are low with respect to ground.
Note 2: "BCD/hexadecimal 1-2-4-8 complement" is a binary code that take the opposite value to "BCD/hexadecimal 1-2-4-8," i.e., takes the value 0 for high voltages and 1 for low voltages.

## Ultra-low Profile, Half-pitch, Surface-mounting DIP Switch

■ ROHS compliant.

- Very low profile of 1.55 mm .

■ Mounting space reduced by 63\% (compared with conventional models).

- Washable, seal tape models available.

■ Embossed taping models available.

## Ordering Information

| Type (striker color) |  | Standard models (White) | Models with seal tape (White) |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Stick models | Embossed taping models (See note) |
| No. of poles | Quantity per stick |  |  |  |  |
| 4 | 75 | A6H-4101 | A6H-4102 | A6H-4102-P |
| 6 | 54 | A6H-6101 | A6H-6102 | A6H-6102-P |
| 8 | 40 | A6H-8101 | A6H-8102 | A6H-8102-P |
| 10 | 33 | A6H-0101 | A6H-0102 | A6H-0102-P |

Note: Embossed taping models are packaged in units of 4,000 . Orders must be made in multiples of 4,000 . Switches are not sold individually.

## Installation

## - Internal Connections (Top View)

## High Performance DIP Switches

with Dustproof Construction
(Internally Sealed)
■ ROHS compliant.

- Dustproof construction yields superior contact reliability.
Designed to DIP (Dual Inline Package) standards and allows automatic mounting with IC insertion machines (Flat actuator types only).
- Smooth, sure switching action.

■ Gold-plated twin contacts and a slide-type, self-cleaning mechanism ensure high reliability.

## Ordering Information

| Type (striker color) |  | Flat actuator (Yellow) | Raised actuator (Yellow) | Side actuator (Yellow) |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: |
| No. of poles | Quantity per <br> stick |  |  |  |  |  |
| 4 | 43 | A6D-4100 | A6D-4103 | A6DR-4100 |  |  |
| 6 | 30 | A6D-6100 | A6D-6103 | A6DR-6100 |  |  |
| 8 | 23 | A6D-8100 | A6D-8103 | A6DR-8100 |  |  |
| 10 | 19 | A6D-0100 | A6D-0103 | A6DR-0100 |  |  |

Note 1: The side-actuator model has a flat actuator inside.
2: Contact your OMRON sales representatives to request special markings or designations.
3: The quantity per stick applies only to A6Ds. A6DRs are packaged 50 to a box.

## Specifications

## ■ Rating/Characteristics

| Switching capacity | 100 mA at 5 VDC and 30 mA at 30 VDC (switching current) <br> $10 \mu \mathrm{~A}$ at 3.5 VDC (minimum current) |
| :--- | :--- |
| Ambient temperature | Operating: -20 to $70^{\circ} \mathrm{C}$ (no icing) |

## Installation

## - Internal Connections (Top View)

## Select the Right Rotary DIP Switch for the Type of Operation

■ ROHS compliant.

- Series includes a standard type that can be operated from the top or side, an extended shaft type that can be operated while mounted on a panel, and a flat type.
- A slider lock and rotating PCB system ensure stable contact reliability.
- Completely sealed construction prevents flux entry during automatic flow soldering.

## Installation

## - Internal Connections (Top View)

## Terminal arrangement Mounting holes (bottom view) (top view)

## Internally Sealed DIL-IC Type Rotary DIP Switch

- ROHS compliant.
- A precision rotary cam and contact driving mechanisms facilitate miniaturization.
■ Reductions of $72 \%$ in height, $66 \%$ vertically, $90 \%$ horizontally and $43 \%$ in overall volume compared with the A6A allow for higher density mounting.
- Insert-molded terminals and an O-ring sealed rotor provide an airtight structure that keeps out dust, dirt and flux.
■ Offset between terminal pins and side of case
 allows simple circuit inspection.

## Ordering Information

| Dielectric strength | 250 VAC for 1 minute between terminals of the same polarity |
| Vibration resistance | Malfunction: 10 to $55 \mathrm{~Hz}, 1.5-\mathrm{mm}$ double amplitude |
| Shock resistance | Malfunction: Approx. $300 \mathrm{~m} / \mathrm{s}^{2}$ |
| Electrical life expectancy | 5,000 steps min. |
| Operating torque | $1.96 \times 10^{-2} \mathrm{~N} \cdot \mathrm{~m}$ max. |
| Weight | $4 \times 1$, top-actuated: 0.64 g <br> $3 \times 3$, top-actuated: 0.62 g <br> $4 \times 1$, side-actuated: 0.8 g <br> $3 \times 3$, side-actuated: 0.83 g <br> (Add 0.13 g for the extended-shaft version of each model.) |

## Output Code Tables

## -10-position Models

| Code | Real Code |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Position | 1 | 2 | 3 | 4 |
| 0 |  |  |  |  |
| 1 | - |  |  |  |
| 2 |  | - |  |  |
| 3 | - | - |  |  |
| 4 |  |  | - |  |
| 5 | - |  | - |  |
| 6 |  | - | - |  |
| 7 | - | - | - |  |
| 8 |  |  |  | - |
| 9 | - |  |  | - |

Note: '॰' indicates that the internal switch is ON.

## 16-position Models

| Code |  | Real Code |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Position | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ |  |
| 0 |  |  |  |  |  |
| 1 | $\bullet$ |  |  |  |  |
| 2 |  | $\bullet$ |  |  |  |
| 3 | $\bullet$ | $\bullet$ |  |  |  |
| 4 |  |  | $\bullet$ |  |  |
| 5 | $\bullet$ |  | $\bullet$ |  |  |
| 6 |  | $\bullet$ | $\bullet$ |  |  |
| 7 | $\bullet$ | $\bullet$ | $\bullet$ |  |  |
| 8 |  |  |  | $\bullet$ |  |
| 9 | $\bullet$ |  |  | $\bullet$ |  |
| A |  | $\bullet$ |  | $\bullet$ |  |
| B |  | $\bullet$ |  | $\bullet$ |  |
| C |  |  | $\bullet$ | $\bullet$ |  |
| D | $\bullet$ |  | $\bullet$ | $\bullet$ |  |
| E |  | $\bullet$ | $\bullet$ | $\bullet$ |  |
| F | $\bullet$ | $\bullet$ | $\bullet$ | $\bullet$ |  |

## Dimensions

Note: 1. All units are in millimeters unless otherwise indicated.
2. A tolerance of $\pm 0.4 \mathrm{~mm}$ applies to the above dimensions unless otherwise specified.

Top-actuated Flat Models with $4 \times 1$ Terminal Arrangement
A6R-101RF
A6R-161RF
