## - Cautions

Use the Switch within the rated voltage and current ranges, otherwise the Switch may have a shortened life expectancy, radiate heat, or burn out. This particularly applies to the instantaneous voltages and currents when switching.

## Correct Use

## HANDLING

## Operation

Do not repeatedly operate the Switch with excessive force. Applying excessive pressure or applying additional force after the plunger has stopped may deform the disc spring of the Switch, resulting in malfunction.
Be sure to set up the Switch so that the plunger will operate in a straight vertical line. A decrease in the life of the Switch may result if the plunger is pressed off-center or from an angle.

## DUST PROTECTION

The Switches are not sealed and should be protected with a resin sheet as shown below when used in dust-prone environments.

## PCBS

The Switch is designed for a $1.6-\mathrm{mm}$ thick, single-side PCB.
Using PCBs with a different thickness or using double-sided, through-hole PCBs may result in loose mounting, improper insertion, or poor heat resistance in soldering. These effects will occur, depending on the type of holes and patterns of the PCB. Therefore, it is recommended that a verification test is conducted before use.
If the PCBs are separated after mounting the Switch, particles from the PCBs may enter the Switch.

## SOLDERING

## General Precautions

Before soldering the Switch on a multilayer PCB, test to confirm that soldering can be performed properly. Otherwise the Switch may be deformed by the soldering heat on the pattern or lands of the multilayer PCB.
Do not solder the Switch more than twice, including rectification soldering. An interval of five minutes is required between the first and second soldering.

## Automatic Soldering Baths <br> (B3F, B3W, B3WN, B3M, B3J)

Soldering temperature: $260^{\circ} \mathrm{C}$ max.
Soldering time: 5 s max. for a $1.6-\mathrm{mm}$ thick single-side PCB
Make sure that no flux will rise above the level of the PCB. If flux overflows onto the mounting surface of the PCB, it may enter the Switch and cause a malfunction.

## Reflow Soldering (Surface Mounting)

(B3FS, B3SN, B3S, B6J)
Solder the terminals within the heating curve shown in the following diagram.

Note: The above heating curve applies if the PCB thickness is 1.6 mm .
The peak temperature may vary depending on the reflow bath used. Confirm the conditions beforehand.
Do not use an automatic soldering bath for surface-mounted Switches. The soldering gas or flux may enter the Switch and damage the Switch's push-button operation.

## Manual Soldering (All Models)

Soldering temperature: $350^{\circ} \mathrm{C}$ max. at the tip of the soldering iron Soldering time: 3 s max. for a $1.6-\mathrm{mm}$ thick, single-side PCB
Before soldering the Switch on a PCB, make sure that there is no unnecessary space between the Switch and the PCB.

## WASHING

Washable and Non-washable Models

| Washable <br> (sealed types) | B3W, B3WN, B3S, B3SN |
| :--- | :---: |
| Non-washable <br> (Standard types) | B3F, B3FS, B3M, B3J |

Standard Switches are not sealed, and cannot be washed. Doing so will cause the washing agent, together with flux or dust particles on the PCB, to enter the Switch, resulting in malfunction.

## Washing Methods

Washing equipment incorporating more than one washing bath can be used to clean washable models, provided that the washable models are cleaned for one minute maximum per bath and the total cleaning time does not exceed three minutes.

## Washing Agents

Apply alcohol-based solvents to clean washable models. Do not apply any other agents or water to clean any washable model, as such agents may degrade the materials or performance of the Switch.

## Washing Precautions

Do not impose any external force on washable models while washing.
Do not clean washable models immediately after soldering. The cleaning agent may be absorbed into the Switch through respiration as the Switch cools. Wait for at least three minutes after soldering before cleaning washable models.
Do not use Sealed Switches while submersed in water or in locations exposed to water.

## SWITCH PACKAGING (TAPING SPECIFICATION MODELS)

 RADIAL TYPESThe tape is packaged by fan-folding into the box, as shown in the following diagram.

| Model | A | B | C |
| :--- | :--- | :--- | :--- |
| B3F | 50 mm | 325 mm | 275 mm |
| B3WN | 53 mm | 326 mm | 350 mm |

Do not apply any external force to the packaging box, or subject it to vibration. Doing so may deform the Switch terminals.

Remove the tape slowly, making sure that the Switches are not entangled or caught. Otherwise the terminals may be deformed.
Do not store the packaged Switches in locations subject to high temperatures or high humidity. The packaging boxes are sealed with paper tape and are not airtight. Storing the packaged Switches in locations with high temperature or high humidity may result in deterioration of the tape and Switches, and long-term storage under such conditions may cause discoloration of the Switch terminals.
Packaging Specifications for Embossed Tape (B3FS-1000P/-1002P, B3SN)

| Standards | Conforms to JEITA. |
| :--- | :--- |
| Package | 3,000 Switches |
| Heat resistance | $50^{\circ} \mathrm{C}$ for 24 hours (without deformation) |

Note: Switches with ground terminals are packaged with the ground terminal on the opposite side of the guide hole.

## B3FS-1010P

$$
1.5^{0.1} \text { dia. }
$$

| Standards | Conforms to JEITA. |
| :--- | :--- |
| Package | 1,000 Switches |
| Heat resistance | $60^{\circ} \mathrm{C}$ for 24 hours (without deformation) |

## B3FS-1050P

| Standards | Conforms to JEITA. |
| :--- | :--- |
| Package | 1,000 Switches |
| Heat resistance | $60^{\circ} \mathrm{C}$ for 24 hours (without deformation) |

B3S

| Standards | Conforms to JEITA. |
| :--- | :--- |
| Package | 1,000 Switches |
| Heat resistance | $50^{\circ} \mathrm{C}$ for 24 hours (without deformation) |

Note: Switches with ground terminals are packaged with the ground terminal on the opposite side of the guide hole.
LEDs (B3J)
Make sure that the polarity of the LEDs is correct. The polarity is not indicated on the Switch, but the positive pole is located on the back surface of the Switch on the side without the OMRON mark.
Connect limiting resistors to the LEDs. The Switch does not have built-in limiting resistors, so satisfy the LED characteristics by obtaining the limiting resistance according to the following formula based on the voltage to be used.
Limiting resistance $(\mathrm{R})=\frac{(\text { Voltage used }(\mathrm{E})-\text { LED forward voltage (VF)) }}{\text { LED forward current (IF) }}$

## A Wide Range of Models: $6 \times 6 \mathrm{~mm}$,

## $12 \times 12 \mathrm{~mm}$, Vertical, and

High-force.
■ ROHS compliant.

- A positive click action plus a long life equal to that of a no-contact switch.
- Radial models (taping specifications) that allow the use of general-purpose radial taping parts insertion machines have been added to
 the series.

## Ordering Information

## $6 \times 6 \mathrm{~mm}$ Models

## Key Tops

B32-series Special Key Tops are available for projected plunger models.

## Allows Cleaning After Soldering with

## Alcohol Solvents

- ROHS compliant.

■ Internal sealed construction allows immersio cleaning with alcohol solvents after solderinc

- Thin, compact construction in both $12 \times 12 \mathrm{~mm}$ and $6 \times 6 \mathrm{~mm}$ sizes.
■ Snap-action contact construction for a positive click action.
- Available with ground terminals for protection against static electricity.

- Sealed construction also provides high reliability in dusty environments.

## Key Tops

B32-series Special Key Tops are available for projected plunger models.

## Designed as Surface-mounting

 Device (SMD) Meeting High-density Mounting Requirements■ ROHS Compliant

- SMD Tactile Switch ideal for high-density mounting.
- Compact and more than 1 mm thinner than conventional tactile switches.
- Available with ground terminals for protection
 against static electricity.
- Sealed construction conforming to IP64 (IEC529) provides high reliability in dusty or humid environments.

## Ordering Information

## List of Models

| Type | Bags | Embossed tape (see note) |
| :--- | :--- | :--- |
| Without ground terminal | B3SN-3012 | B3SN-3012P |
| With ground terminal | B3SN-3112 | B3SN-3112P |

Note: Switches in bags must be ordered in units of 100 pieces, and Switches on embossed tape must be ordered in units of 3,000 pieces

## Operating Characteristics

| Operating force (OF) | $1.57 \pm 0.49 \mathrm{~N}\{160 \pm 50 \mathrm{gf}\}$ max. |
| :--- | :--- |
| Releasing force (RF) | $0.29 \mathrm{~N}\{30 \mathrm{gf}\} \mathrm{min}$. |
| Pretravel (PT) | $0.25 \pm 0.15 \mathrm{~mm}$ |

## Specifications

- Ratings/Characteristics

| Switching capacity | 1 to $50 \mathrm{~mA}, 5$ to 24 VDC (resistive load) |
| :--- | :--- |
| Ambient temperature | Operating: $-25^{\circ} \mathrm{C}$ to $70^{\circ} \mathrm{C}$ (with no icing) |
| Ambient humidity | Operating: $35 \%$ to $85 \%$ |
| Contact configuration | SPST-NO |
| Contact resistance | $100 \mathrm{~m} \Omega$ max. (initial value) (rated: $1 \mathrm{~mA}, 5 \mathrm{VDC}$ ) |
| Insulation resistance | $100 \mathrm{M} \Omega \mathrm{min}$. (at 250 VDC ) |
| Dielectric strength | $250 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ for 1 min |
| Bounce time | 5 ms max. |
| Vibration resistance | Malfunction: 10 to $55 \mathrm{~Hz}, 1.5 \mathrm{~mm}$ double amplitude |
| Shock resistance | Destruction: $1,000 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 100 G$\}$ max. |
| Life expectancy | 100,000 operations min. |
| Weight | Approx. 0.2 g |

## Nomenclature

## Dimensions

Note 1. All units are in millimeters unless otherwise indicated. Unless otherwise specified, a tolerance of $\pm 0.4 \mathrm{~mm}$ applies to all dimensions.
2. No terminal numbers are indicated on the Switches. The numbers used for terminals in the following graphics are indicated in the "Bottom View" diagram below. In this diagram, the Switch is rotated so that the terminals are on the right and left-hand sides, and the OMRON logo appears the right way up.

## Ultra-low Profile Dome Array with

 Dust-Proof Construction and Crisp
## Clicking Action

■ ROHS compliant.
■ No soldering required.

- Attach directly to PCB to make tactile switch.
- Matrix adhesive used to create highly dustproof construction with good ventilation.
- Lower profile, lighter weight, and crisp clicking action achieved using stainless steel contact dome.
■ OMRON's unique circular contact action ensures a high level of resistance to foreign matter.
- Can be designed and produced according to user specifications (e.g., external dimensions or key layout).

## Structure

## CIRCULAR CONTACT

When contact dome keys are attached to the PCB, any PCB dust or foreign particles will tend to collect in the center of the key when it is pressed. Therefore, poor contact occurs easily in keys that provide contact at the center point only.
The circular contact construction provides contact along the circumference of a circle, thus preventing poor contact by avoiding the center point.

## MATRIX ADHESIVE

This adhesive has grid-shaped slits for ventilation with the structure shown below. The height of the slits is 15 micrometers ensuring both ventilation and dust-proofing.

## Specifications

| Item | Specification |
| :--- | :--- |
| Diameter | $4-\mathrm{mm}$ dia. and $5-\mathrm{mm}$ dia. models available |
| Operating force (OF) | $1.57 \pm 0.49 \mathrm{~N}$ |
| Releasing force (RF) | $0.2 \mathrm{~N} \mathrm{min}$. |
| Pretravel (PT) | $0.2 \pm 0.1 \mathrm{~mm}$ |
| Thickness | $0.25 \pm 0.1 \mathrm{~mm}$ |
| Life expectancy | 4 mm dia.: 500,000 operations min. <br> $5-\mathrm{mm}$ dia.: $1,000,000$ operations min. |
| Ambient operating temperature | -40 to $80^{\circ} \mathrm{C}$ |
| Ambient storage temperature | -40 to $85^{\circ} \mathrm{C}$ |
| Material | Stainless steel |
| Plating | Unplated, silver |

Note: Contact dome specifications not shown in this table are also available.

- Recommended Contact Form on PCB

4-mm Diameter Contact Dome

5-mm Diameter Contact Dome

## Precautions

CORRECT USE

## ATTACHING TO THE PCB

Remove the Dome Array from the sheet using tweezers, and attach it above the contact on the PCB surface, which has been wiped clean in advance.
Do not reuse a B3DA Dome Array that has been detached from the PCB. Attach a new Dome Array to the PCB.

Do not touch the contact dome with bare hands, or with unclean gloves. Doing so may damage the contact dome, which is the part that comes in contact with the PCB.

## REFLOW SOLDERING

The Dome Array cannot withstand heat from reflow soldering. Always perform reflow soldering before attaching the Dome Array to the PCB.
WASHING
Do not wash the Dome Array. The Dome Array is not water-resistant and must not be exposed to water or other liquids.

## ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937 . To convert grams into ounces, multiply by 0.03527 .

## Single-key Type Added to Series of B3DA Ultra-low Profile Dome Arrays

■ ROHS compliant.
■ No soldering required.

- Attach directly to PCB to make an ultra-low profile tactile switch.
- Construction provides strong resistance to static electricity by having no soldered terminals.

NEW
■ Matrix adhesive used to create highly dustproof construction with good ventilation.
Lower profile, lighter weight, and crisp clicking action achieved using stainless steel contact dome.

OMRON's unique circular contact action ensures a high level of resistance to foreign matter.

## Application Examples

Use Dome Keys for the operating parts on various electronic devices that require low-profile controls, as follows:

- Operating switches with few mounted parts above PCBs. (Example: Camera operating buttons)
- Small orders, where initial investment in Dome Arrays is not feasible.
(Example: Trial applications, commercial equipment, etc.)
- Applications requiring a single key only. (Example: Reset buttons)

## Specifications

## ■ Ratings/Characteristics

| Item | Model |  |
| :---: | :---: | :---: |
|  | B3D-4112 | B3D-5112 |
| Diameter of contact dome | 4-mm dia. | 5-mm dia. |
| Operating force (OF) | $1.67 \pm 0.49 \mathrm{~N}$ |  |
| Releasing force (RF) | 0.2 N min. |  |
| Pretravel (PT) | $0.2 \pm 0.1 \mathrm{~mm}$ |  |
| Thickness | $0.3 \pm 0.1 \mathrm{~mm}$ |  |
| Life expectancy | 500,000 operations min. | 1,000,000 operations min. |
| Switching capacity | 12 VDC, 10 mA (resistive load) (recommended minimum load: $3 \mathrm{VDC}, 1 \mathrm{~mA}$ (resistive load) |  |
| Ambient operating temperature | -40 to $80^{\circ} \mathrm{C}$ |  |
| Ambient storage temperature | -40 to $85^{\circ} \mathrm{C}$ |  |
| Contact dome | Stainless steel |  |
| Plating | Silver |  |

Note: The Dome Keys are sold in units of 500 ( 20 sheets, with 25 Dome Keys per sheet). Orders must be made in multiples of 500 Dome Keys.

## Structure

## MATRIX ADHESIVE

The surface structure of this adhesive has grid-shaped slits, as shown in the following cross-sectional diagram. These slits provide both ventilation and dust-proofing, which is required for contact dome operation.

## CIRCULAR CONTACT

When contact dome keys are attached to the PCB, any PCB dust or foreign particles will tend to collect in the centre of the key when it is pressed. Therefore, poor contact occurs easily in keys that provide contact at the centre point only.
The circular contact construction provides contact along the circumference of a circle, thus preventing poor contact by avoiding the centre point.

circumference: R 0.2

## Dimensions

B3D-4112

B3D-5112

## Precautions

## CORRECT USE

## ATTACHING TO THE PCB

Remove the Dome Key from the sheet using tweezers or a vacuum pick-up tool, and attach it above the contact on the PCB surface, which has been wiped clean in advance. Press down on the top surface using an elastic material, such as urethane rubber, and a force of 2.94 to 4.9 N . Place a positioning mark (circle) on the PCB for easy positioning.
Make sure that the position of the Dome Key is aligned correctly before use. Significant misalignment may result in short-circuits or reduced sensitivity.
Note: The recommended vacuum pick-up tool is the Hozan P835 Vacuum Pick with an M suction pad (7-mm dia.).
Do not reuse a B3D Dome Key that has been detached from the PCB. Attach a new Dome Key to the PCB.
Do not touch the contact dome with bare hands, or with unclean gloves. Doing so may damage the contact dome, which is the part that comes in contact with the PCB.

## REFLOW SOLDERING

The Dome Key cannot withstand heat from reflow soldering. Always perform reflow soldering before attaching the Dome Key to the PCB.

## WASHING

Do not wash the Dome Key. The Dome Key is not water-resistant and must not be exposed to water or other liquids.
