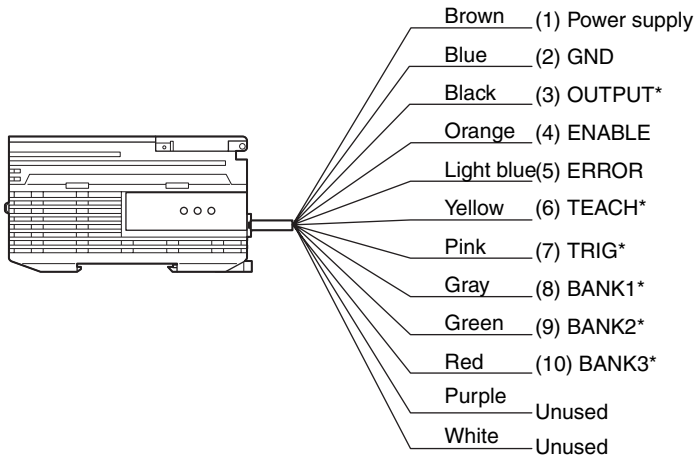
About the I/O cable

The following shows the leads that comprise the I/O cable.



* : Enabled only in the RUN mode

1. Power supply
   This connects the power supply.
   Supply power from a DC power supply unit that has a countermeasure (safety ultra-low voltage circuit) built-in for preventing high voltages from occurring.
   Wire the power supply separately from other devices. Wiring them together or placing them in the same duct may cause induction, resulting in malfunction or damage.
2. GND
3. OUTPUT (control output)
   This outputs judgment results.
   This lead is interlocked with OUTPUT LED.
4. ENABLE (enable output)
5. ERROR (error output)
   This turns ON when an error is generated.
6. TEACH (teaching input)
   There are two teaching modes, workpiece stop teaching and workpiece move teaching. These teaching modes can be selected in the menu.
7. TRIG (measurement trigger input)
   There are two measurement modes, synchronous measurement and continuous measurement. Which mode of measurement is to be performed in is selected in the menu.
8. BANK1 (bank switching input 1)
9. BANK2 (bank switching input 2)
10. BANK3 (bank switching input 3)

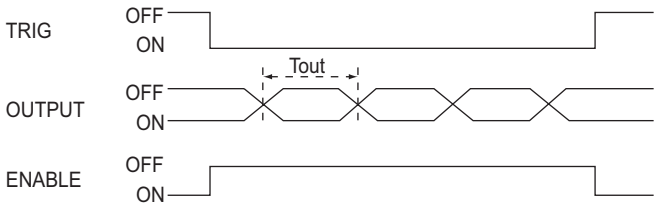
Timing charts

The following shows the timing charts when communication is performed with external devices.

Measurement

Continuous measurement

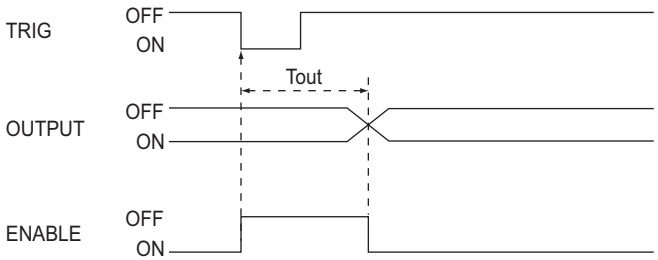
Measurement is performed continuously for the duration that the TRIG signal is ON.
The measurement result is updated, and output to external devices at each measurement cycle.



Tout: Measurement cycle
The measurement cycle changes depending on the setting.

Synchronous measurement

Measurement is performed only once in synchronous with the change in TRIG signal state from OFF to ON, and the result is output.



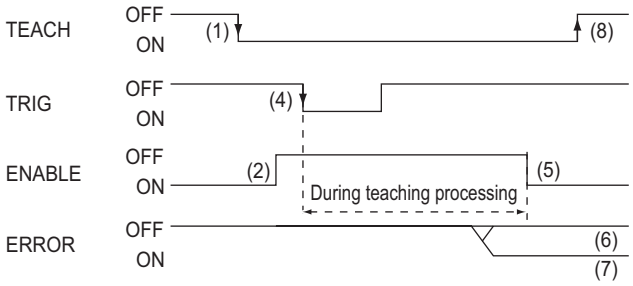
Tout: Measurement time.
The measurement time changes depending on the setting.

- The minimum ON width of the TRIG signal is 1 ms.
- The OUTPUT signal is held until the next measurement result is updated.
  Note, however, that when one-shot output is currently set, the OUTPUT signal is held for the preset time.

Teaching

Workpiece stop teaching

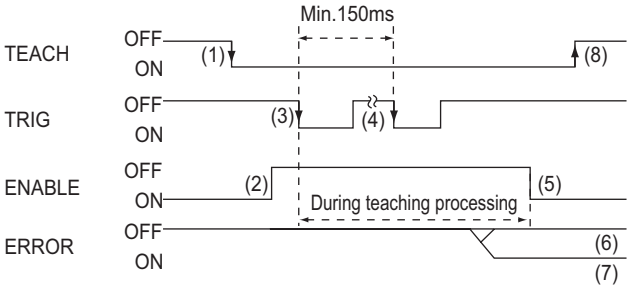
Teaching processing is performed according to TRIG signal input after the TEACH signal is input from the outside.
Measurement is not performed while teaching is being performed. Do not move the workpiece until teaching is completed.



1. Turn the TEACH signal ON.
2. Confirm that the ENABLE signal has turned OFF.
3. Make sure that the workpiece to be taught is in the teaching area.
4. Input the TRIG signal from the outside.
5. The ENABLE signal turns ON after teaching is completed. At this timing, check the state of the ERROR signal.
6. When teaching has been completed successfully, the ERROR signal stays OFF.
7. When teaching fails, the ERROR signal turns ON.
8. Turn the TEACH signal OFF, and end teaching processing.
   When teaching fails, the state before teaching was initiated is returned to. Perform teaching again.
   If the TEACH signal is turned OFF midway, teaching is disabled.

Workpiece move teaching

Use this teaching mode when the object cannot be stopped.
Teaching processing is divided up and performed in synchronous with the TRIG signal input after the TEACH signal is input from the outside.
Teaching must be processed six times.
Measurement is not performed while teaching is being performed.



1. Turn the TEACH signal ON from the outside.
2. Confirm that the ENABLE signal has turned OFF.
3. Input the TRIG signal at the timing for measuring the workpiece to be taught.
4. Repeat the input in step (3) six times. (Trigger inputs from the seventh time onwards are ignored.)
5. The ENABLE signal turns ON after teaching is completed. Check the state of the ERROR signal at this timing.
6. When teaching has been completed successfully, the ERROR signal stays OFF.
7. When teaching fails, the ERROR signal turns ON.
8. Turn the TEACH signal OFF, and end teaching processing.
   When teaching fails, the state before teaching was initiated is returned to. Perform teaching again.
   If the TEACH signal is turned OFF midway, teaching is disabled.

Bank switching

The bank No. can be switched when BANK1o BANK3 are connected as follows.

Bank No.	BANK1	BANK2	BANK3
BANK1	OFF	OFF	OFF
BANK2	ON	OFF	OFF
BANK3	OFF	ON	OFF
BANK4	ON	ON	OFF
BANK5	OFF	OFF	ON
BANK6	ON	OFF	ON
BANK7	OFF	ON	ON
BANK8	ON	ON	ON

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.
To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
